Incident Report

****Cybersecurity Incident Report****

****Executive Summary****

On July 3, 2005, at approximately 23:16:09, a suspicious FTP connection was detected from the IP address 62.99.164.82 to our system. This incident report details the analysis of this event.

****Severity****: Medium

****Attack Analysis****

The retrieved logs indicate multiple consecutive FTP connections from the same IP address (62.99.164.82) within a short period (same timestamp). While this could be legitimate activity, the repeated attempts and lack of clear user context raise suspicions about potential malicious intent.

****Evidence****

Quote from retrieved log:

* ftpd connection from 62.99.164.82 (62.99.164.82.sh.interxion.inode.at) at Sun Jul 3 23:16:09 2005

* ftpd connection from 62.99.164.82 (62.99.164.82.sh.interxion.inode.at) at Sun Jul 3 23:16:09 2005

* ftpd connection from 62.99.164.82 (62.99.164.82.sh.interxion.inode.at) at Sun Jul 3 23:16:09 2005

****Indicators of Compromise (IoCs)****

* IP address: 62.99.164.82

* Timestamp: July 3, 2005, 23:16:09

****Risk Assessment****

The risk associated with this incident is medium due to the repeated attempts and lack of clear user context. Further investigation is necessary to determine whether this is a legitimate or malicious activity.

****Recommendations****

1. Monitor FTP connections from this IP address for further suspicious activity.
2. Conduct an internal review of system access controls and permissions to ensure there are no vulnerabilities that could be exploited by an attacker.
3. Consider implementing additional security measures, such as blocking this IP address or configuring firewalls to restrict access.

****Conclusion****

This incident report details a suspicious FTP connection from the IP address 62.99.164.82 on July 3, 2005. While the severity is considered medium, further investigation and monitoring are necessary to determine whether this is a legitimate or malicious activity.
