### Incident Report

**\*\*Cybersecurity Incident Report\*\***

**\*\*Executive Summary\*\***

A potential security incident was detected on July 3, 2005, involving repeated FTPD connections from the IP address 62.99.164.82. This report provides an analysis of the incident, including severity assessment, evidence, indicators of compromise (IoCs), risk assessment, and recommendations.

**\*\*Severity:\*\***

Medium

**\*\*Attack Analysis:\*\***

The retrieved logs indicate a series of FTPD connections from the same IP address (62.99.164.82) within a short period (approximately 1 minute). This repetitive behavior raises suspicions about potential malicious activity.

**\*\*Evidence:\*\***

Quote from the log evidence:

"ftpd connection from 62.99.164.82 (62.99.164.82.sh.interxion.inode.at) at Sun Jul 3 23:16:09 2005"

"ftpd connection from 62.99.164.82 (62.99.164.82.sh.interxion.inode.at) at Sun Jul 3 23:16:09 2005"

"ftpd connection from 62.99.164.82 (62.99.164.82.sh.interxion.inode.at) at Sun Jul 3 23:16:09 2005"

**\*\*Indicators of Compromise (IoCs):\*\***

\* IP address: 62.99.164.82

\* FTPD connections within a short period

**\*\*Risk Assessment:\*\***

The repetitive behavior and the fact that these connections are not part of legitimate network activity suggest a potential threat. However, without further investigation or additional evidence, it is difficult to determine the severity of this incident.

**\*\*Recommendations:\*\***

1. Further monitoring and analysis of the suspicious IP address and FTPD connections.
2. Conduct a thorough investigation into the nature of these connections and the potential impact on the network.
3. Implement additional security measures, such as IP blocking or rate limiting, to prevent similar incidents in the future.

**\*\*Conclusion:\*\***

Based on the available evidence, this incident appears to be suspicious, with repeated FTPD connections from the same IP address within a short period. Further investigation and analysis are required to determine the

severity and impact of this incident.

## Indicators of Compromise (IOC)

### Indicators of Compromise (IOC Summary)

| IOC Type      | Count |
|---------------|-------|
| Source IPs    | 37    |
| Username      | 0     |
| Services      | 64    |
| Hostnames     | 38    |
| Failed Logins | 0     |
